Summary

I'm a dynamic and driven B.Tech CSE student at SRM Institute of Science and Technology with a passion for coding, problem-solving, and continuous growth. With hands-on experience in C, C++, Java, and Shell Scripting, I enjoy building a strong foundation in software development and systems programming.

Education

S.R.M Institute Of Science & Technology — B.Tech • CGPA - 5.8
Computer Science — Chennai • 2023 - 2027

V.L.M Public School — HSC • 74.5%
Physics, Chemistry and Maths — Alwar • 2020 - 2022

Alwar Public School — SSC • 86.8%
Physics, Chemistry and Maths — Alwar • 2020

Projects

AI Ethics Advisor — January 2026 - Ongoing

- **Developed** a full-stack web application leveraging a locally hosted Llama 3 (8B) model to analyze complex business dilemmas through multiple philosophical frameworks.
- **Engineered** a custom LLM environment by tuning model parameters (temperature, 8k context window) and designing strict system prompts to enforce 100% valid JSON streaming.
- **Implemented** a highly responsive UI featuring real-time AI text streaming, a persistent stateful sidebar for chat history, and contextual follow-up generation.

DeepFake Detection — August 2025 - September 2025

- **Architected** a microservices-based MVP for a multimodal deepfake detection system to analyze and identify manipulated media across text and images.
- **Engineered** distributed backend services using FastAPI for data ingestion, modular detection, and deterministic weighted fusion, integrating MinIO for scalable blob storage.
- **Containerized** the entire application suite using Docker and Docker Compose, streamlining local deployment and enabling seamless service orchestration.

InsightX Analytics — March 2026

- **Co-developed** an AI-powered analytics web application that translates natural language questions into executable SQL queries to analyze transaction data.
- **Integrated** the Google Gemini API with a Python backend to generate transparent SQL and deliver structured, hallucination-free business insights based strictly on database results.
- **Engineered** cross-platform automation scripts (Bash/Batch) for seamless local environment setup and dependency management across Mac, Linux, and Windows.

Skills

Languages
C, C++, Python, Java, HTML, JavaScript, SQL, Linux

Tools and Tech
RedHat Linux, MongoDB, MySQL, PyTorch, Pandas, Docker, React, WordPress, Cisco Packet Tracer

Core Concepts
Data Structures and Algorithms, DBMS, Operating Systems

Certifications

Red Hat OpenShift Development I: Introduction to Containers with Podman (DO188 - RHA) - Ver. 4.18 14th November, 2025
RedHat
Gained practical expertise in building, managing, and deploying scalable, containerized applications using Podman, Kubernetes, and Red Hat OpenShift.

DBMS Course - Master the Fundamentals and Advanced Concepts 6th May, 2025
Scaler
Completed a comprehensive course covering the fundamentals and advanced topics of Database Management Systems, including ER modeling, relational algebra, SQL, normalization, transactions, indexing, and concurrency control.

Data Structures Demystified: A Beginner's Journey 10th November, 2024
Udemy
Covered recursion, dynamic programming, linked lists, trees, graphs

Languages

English
Fluent

Hindi
